Benzocaine is an ester of paraaminobenzoic acid, lacking the terminal diethylamino group of procaine, with anesthetic activity. Benzocaine binds to the sodium channel and reversibly stabilizes the neuronal membrane which decreases its permeability to sodium ions. Depolarization of the neuronal membrane is inhibited, thereby blocking the initiation and conduction of nerve impulses.

The World Bank, in its latest edition of 'Africa's Pulse', projects the economy will expand by 3.3% in 2021 - a full percentage point rise compared to its April forecast. "This rebound is currently fueled by elevated commodity prices, a relaxation of stringent pandemic measures, and recovery in global trade," said the World Bank.

Erectile dysfunction (ED), also called impotence, is the type of sexual dysfunction in which the penis fails to become or stay erect during sexual activity. It is the most common sexual problem in men. Through its connection to self-image and to problems in sexual relationships, erectile dysfunction can cause psychological harm.. In about 80% of cases, physical causes can be identified.
