Building codes distinguish between two basic kinds of materials: non-combustible (concrete, masonry, gypsum) and combustible (wood, plastics, etc.). While not inherently combustible, steel does deform and fail in high heat; for this reason, it must be fireproofed when part of a non-flammable construction system. Building codes typically recognize five basic

Building Code Basics: Residential: Based on 2009 ...

Virtually all regions of the United States are covered by a legally enforceable building code that governs the design and construction of buildings, including residential dwellings. Although building codes are legally a state police power, most states allow local political jurisdictions to adopt or modify building codes to suit their "special needs" or, in a few cases, to write their own code.

Code Basics . The following code specifications are derived from the International Building Code (IBC) for 1- and 2-story residences. This "nutshell" guide is intended to give you a general sense of code requirements for foundation footings.

Guide to Foundation Footings Building Code

The California Building Code, based on the year, sometimes requires the use of a corresponding copy of the Uniform Building Code as not all of the model code regulations are reprinted. For example, even with the 1981 California Building Code, you would still need a copy of the 1979 Uniform Building Code in order to have a complete collection of the regulations effective in 1982.
