Transpersonal psychology, or spiritual psychology, is a sub-field or school of psychology that integrates the spiritual and transcendent aspects of the human experience with the framework of modern psychology. The transpersonal is defined as "experiences in which the sense of identity or self extends beyond (trans) the individual or personal to encompass wider aspects of humankind, life, psyche ...

Transpersonal psychology - Wikipedia

Skeptics have open minds, but not so open that their brains fall out: they resist believing something in the first place without adequate evidence or reason, and this attribute is worthy of emulation. Science treats new ideas with the same skepticism: extraordinary claims require extraordinary evidence to justify one's credulity.

An Introduction to Science

The heart of the eighteenth century Enlightenment is the loosely organized activity of prominent French thinkers of the mid-decades of the eighteenth century, the so-called "philosophes" (e.g., Voltaire, D'Alembert, Diderot, Montesquieu). The philosophes constituted an informal society of men of letters who collaborated on a loosely defined project of Enlightenment exemplified by the ...

Enlightenment (Stanford Encyclopedia of Philosophy)

Formally, skepticism as a topic occurs in the context of philosophy, particularly epistemology, although it can be applied to any topic such as politics, religion, and pseudoscience. One reason why skeptics assert that the supernatural cannot exist is that anything "supernatural" is not a part of the natural world simply by definition.

Supernatural - Wikipedia

The demarcation between science and pseudoscience is part of the larger task of determining which beliefs are epistemically warranted. This entry clarifies the specific nature of pseudoscience in relation to other categories of non-scientific doctrines and practices, including science denial(ism) and resistance to the facts.

Science and Pseudo-Science (Stanford Encyclopedia of ...)

Science seeks to organize and make sense of the world. When something fails to fit into what humans call the laws of nature, then science must adjust to the new information. If science, in this age of enlightenment, assumes that all evidence is equally weighted, as Hume's weighing analogy seems to require, then science is impossible.

The extraordinary advances made in this field by Dirac ... leave open the question whether it will be possible to satisfy the claims of the two theories without at the same time determining the Sommerfeld fine-structure constant." — Werner Heisenberg, *Physics and Philosophy: The Revolution in Modern Science*

Werner Heisenberg Quotes (Author of Physics and Philosophy)

Rene Descartes (1596-1650) was a mathematician and philosopher writing in the beginning of the era we now call the Enlightenment. The Enlightenment is notable for a few trends. Science became more unified and the method of experiment became appreciated as a reliable way of knowing about the world. Many new scientific disciplines were formed.

Nihilism. Nihilism is the belief that all values are baseless and that nothing can be known or communicated. It is often associated with extreme pessimism and a radical skepticism that condemns existence. A true nihilist would believe in nothing, have no loyalties, and no purpose other than, perhaps, an impulse to destroy.

Robert Frost was born in San Francisco, but his family moved to Lawrence, Massachusetts, in 1884 following his father’s death. The move was actually a return, for Frost’s ancestors were originally New Englanders, and Frost became famous for his poetry’s engagement with New England locales, identities, and themes. Frost graduated from Lawrence High School, in 1892, as class poet (he also ...
