An autofocus (or AF) optical system uses a sensor, a control system and a motor to focus on an automatically or manually selected point or area. An electronic rangefinder has a display instead of the motor; the adjustment of the optical system has to be done manually until indication. Autofocus methods are distinguished by their type as being either active, passive or hybrid variants.

This little series will eventually cover the best and worst cameras from each decade covering the mid-1800s all the way up to the 2010s. I'm starting with the 1990s because it feels like an excellent transition point in our recent history: it saw the release of some of the most advanced film cameras ever made as well as the first spits and spurts of mass market digital cameras.

The FA20E and FA20F engines have a cast aluminium alloy cylinder head with chain-driven double overhead camshafts per cylinder bank. The four valves per cylinder - two intake and two exhaust - were actuated by roller rocker arms which had built-in needle bearings that reduced the friction that occurred between the camshafts and the roller rocker arms.
