Heredity and Evolution are the most essential and fundamental branches of biology and are linked to each other through inheritable traits. These two terminologies help us to learn and understand about the continuity of the life cycle on the planet Earth. Both the terms are correlated to each other and without heredity, there can be no evolution.

Cancer is a group of diseases involving abnormal cell growth with the potential to invade or spread to other parts of the body. These contrast with benign tumors, which do not spread. Possible signs and symptoms include a lump, abnormal bleeding, prolonged cough, unexplained weight loss, and a change in bowel movements. While these symptoms may indicate cancer, they can also have other causes.
