In mathematics, a group is a set equipped with an operation that combines any two elements to form a third element while being associative as well as having an identity element and inverse elements. These three conditions, called group axioms, hold for number systems and many other mathematical structures. For example, the integers together with the addition operation form a group.

Welcome to part five of a six-part series where we prove that the fundamental group of the circle $\pi_1(S^1)$ is isomorphic to \mathbb{Z} . In this post we prove that our homomorphism from \mathbb{Z} to $\pi_1(S^1)$ is injective. The proof follows that found in Hatcher's Algebraic Topology section 1.1.

En mathématiques, et plus précisément en topologie algébrique, le théorème du point fixe de Brouwer fait partie de la grande famille des théorèmes de point fixe, qui énoncent que si une fonction continue f vérifie certaines propriétés, alors il existe un point x_0 tel que $f(x_0) = x_0$. La forme la plus simple du théorème de Brouwer prend comme hypothèse que la fonction f est ...

En mathématiques, le théorème fondamental de l'algèbre, aussi appelé théorème de d'Alembert-Gauss et théorème de d'Alembert, indique que tout polynôme non constant, à coefficients complexes, admet au moins une racine. En conséquence, tout polynôme à coefficients entiers, rationnels ou encore réels admet au moins une racine complexe, car ces nombres sont aussi des complexes.
