Multiagent Systems for Manufacturing Control: A Design ...

Multi-agent systems are semiautonomous decision makers and cooperate to optimize the manufacturing process. Increasing production the capacity is achieved by developing, implementing efficient and effective systems from control based on current manufacturing process. The model multi-agent proposed in this paper is based on communication between agents who, based on their mechanisms drive to autonomous decision making.

The paradigm of multi-agent systems is used in various application scenarios like manufacturing control or multi-agent assistance systems that aim at providing assistance to the user of the system...

Multiagent systems for manufacturing control: a design ...

Current control strategies for controlling these manufacturing systems through centralized and hierarchical control lack the operational flexibility to adapt to these unforeseen changes. Multi-agent control has been proposed to provide better flexibility and responsiveness. In this type of architecture, smart parts can take advantage of various ...

Multi-agent control of smart manufacturing systems ...

The increasing complexity of manufacturing systems as well as the overall demands for flexible and fault-tolerant control of production processes stimulates (among many others) two key emerging technologies that are already making an important breakthrough in the field of intelligent manufacturing, control, and diagnostics.

Holonic and Multi-Agent Systems for Manufacturing ...

Agent-based software systems are becoming a control software technology for manufacturing control systems. A multi-agent based platform can offer distributed intelligent control functions with communication, cooperation, and synchronization capabilities that can cover the behavior specifications of components and also the production specifications to be fulfilled by the manufacturing system (see,).

Multi-Agent Systems in Control Engineering: A Survey

Multi-agent systems (MAS) are particularly adapted to deal with dynamic distributed environments and are typically used to manage business workflows or data flows in manufacturing systems. From a control perspective, holonic representation allows both the informational and the physical parts in such manufacturing systems to be modelled.

Role-based manufacturing control in a holonic multi-agent ...

In a typical application of multi-agent systems in manufacturing control based on CNP (e.g. Gu et al., 1997, Krothapalli and Deshmukh, 1999, Lim and Zhang, 2004, Wong et al., 2006a, Wong et al., 2006b), the allocation of parts on machines is accomplished through a process of interaction between agents representing parts and agents representing ...

Behavioral modeling and verification of multi-agent ...

Multi-agent systems can manifest self-organisation as well as self-direction and other control paradigms and related complex behaviors even when the individual strategies of all their agents are simple.

Multi-agent system - Wikipedia

Hence in agent-based systems, there is no centralized system control structure, and no pre-defined agenda for the system execution, as exist in traditional systems. This book systematically describes the principles, key issues, and applications of agent technology in relation to concurrent engineering design and manufacturing.
