Abstract. Mycotoxins, highly toxic secondary metabolites of fungus, have brought considerable threats to human health. It is of great significance to develop low-cost, rapid and efficient analytical methods for monitoring mycotoxins in foodstuffs.

The contaminations of Fusarium mycotoxins in grains and related products, and the exposure in human body are considerable concerns in food safety and human health worldwide. The common Fusarium mycotoxins include fumonisins, T-2 toxin, deoxynivalenol and zearalenone.

fumonisin, zearalenone and nivalenol/deoxynivalenol.

Mycotoxins - WHO

ZEA mycotoxins begin in grains such as corn, barley, oats, wheat, rice and sorghum, but can also travel up the food chain to grain-fed meat, eggs and dairy products, and are even found in beer.
