Norris states that without a guiding theoretical map, comparativists "remain stranded in Babel" (p. 323) and that only the development of widely shared core theoretical concepts and standardized operational measures can reduce the "cacophonous Babel" in comparative communication research (p. 327). Unfortunately, even today, many ...

Measurement is an integral part of modern science as well as of engineering, commerce, and daily life. Measurement is often considered a hallmark of the scientific enterprise and a privileged source of knowledge relative to qualitative modes of inquiry. [] Despite its ubiquity and importance, there is little consensus among philosophers as to how to define measurement, what sorts of things are ...

Measurement in Science (Stanford Encyclopedia of Philosophy)

Open and Closed Systems A system is commonly defined as a group of interacting units or elements that have a common purpose. The units or elements of a system can be cogs, wires, people, computers, and so on. Systems are generally classified as open systems and closed systems and they can take the form of mechanical, biological, or social systems.

And there is always the risk that the computer on which the privacy-preserving software runs is infected by a Trojan horse (or other digital pest) that monitors all communication and knows the identity of the user. Another option for providing anonymity is the anonymization of data through special software.
