The differential of a mass involving or arising from the clivus is a relatively narrow one and can be divided into whether the lesion arises from the skull base itself, the intracranial compartment above or the base of skull below.. When evaluating the clivus it is important to compare the marrow signal to that of the adjacent pons on non-contrast, non-fat saturated T1 sequences.

### **Clival masses | Radiology Reference Article | Radiopaedia.org**

An MRI of the shoulder of a healthy subject was performed in the 3 planes of space (coronal, axial, sagittal) commonly used in osteoarticular imaging, with two weightings to explore the musculoskeletal pathology of the shoulder: spin-echo T1 and proton-density with fat saturation sequences.
